

August 10, 2017

**Addendum No. 2**  
**Request for Qualifications No. 17-0095**  
**Enterprise Asset Management Information System (EAMIS)**

Please make the following changes:

A line for Public Parking has been added to the Attachment E Resource Hours Worksheet and Attachment B Cost Worksheet.

The City has also added "Phase 1 Historical Data Conversion" to the Attachment B Cost Worksheet.

Add the following requirement under 2.04 Scope of Services, 10) Functional and Nonfunctional Requirements (page 19):

s. Active Directory - The City is a complete Microsoft Active Directory (AD) shop and require to run as much as possible from AD when it comes to user account management access to an application. Describe how your application interacts with AD. The City requires a system that has a real-time interface with AD, so when we disable a user in AD it would disable that same user in your product as well as when we create a new user id it would bring them in with at least a first and last name and assigned user id.

Sign this form and return with your RFQ submission.
