FOR THE SOUTHEASTERN AVENUE DESIGN FOR THE CITY OF SIOUX FALLS

RFP date posted: October 31, 2008

Expiration date: November 21, 2008

Deadline for Questions 2:00 CT, November 19, 2008.

Date updated: **November 6, 2008**

Submitted November 6, 2008.

1. Can we get GIS utility and aerial information?
 - a. We did not prepare any electronic information for these projects in advance for the Request for Proposals. All existing utility information is available in the Request for Proposal in the text. All aerial information can be downloaded from the Interactive GIS on the City of Sioux Falls website.

2. I have reviewed the traffic study, is that available in a digital format or only for review at City Engineering?
 - a. The Traffic Study is only for review at the City Engineering Office.

3. Does the consultant need to collect soil borings?
 - a. The City of Sioux Falls has active agreements with a couple of the geotechnical firms in the City and the Consultant needs to discuss the scope with these firms, get an estimate and select the firm they feel will best do the work. The geotechnical firm invoices the City directly however, the results and coordination is done through the consultant. Typically, soil borings are done in the design phase for all City projects. The consultant does not include the geotechnical firm and hours in their Request for Proposal.

- 4.
