City of Sioux Falls Engineering Design Standards for Public Improvements

Here, for your easy reference, is a manual setting forth the Engineering Design Standards for public improvements within the city of Sioux Falls. Attention and compliance to these standards will result in less confusion and uncertainty in planning, designing, and constructing these improvements within the city. These standards are also developed to reduce the maintenance costs and minimize operational problems associated with public improvements for the city, its citizens, and taxpayers. These standards are by no means all-inclusive. However, they do provide the basic design principles and standards to be used in developing public improvements.

The Table of Content page will reflect the date of the most recent revision to the standards. The most current approved version will be posted on the City's website at www.siouxfalls.org. The standards will be updated on an annual basis, typically in the latter part of the year, and will be posted on the website upon approval. If you have any questions regarding any of these design standards or the update process, please contact the City of Sioux Falls, Engineering Division, 231 North Dakota Avenue, P.O. Box 7402, Sioux Falls, SD 57117-7402. Please check with the City's website to ensure your manual is current with the most recent revisions.
