

Who **WINS** through this Program?

The Business Sector Wins!

This partnership provides businesses and organizations with an economical method of properly managing small quantities of hazardous waste, with less hassle and expense.

The City Wins!

The City of Sioux Falls wins through quantity reduction. Through our goal of waste minimization in our Sustainability Master Plan, we are committed to reducing the amount of hazardous waste disposed at the landfill and to the sanitary sewer.

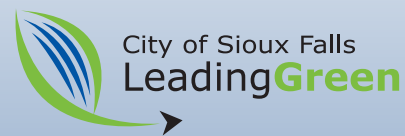

The Environment Wins!

This program reduces impact from toxic and hazardous waste to the environment while extending the life of the Sioux Falls Regional Sanitary Landfill. Extension of the landfill's life is key to reduction of land use and expense, which helps fulfill our Sustainability Master Plan waste minimization goals.

Business Hazardous Waste Management Program for Very Small Quantity Generators (VSQG)

PUBLIC/PRIVATE PARTNERSHIP
IS A WIN FOR US ALL!

Business Hazardous Waste Management Program for Very Small Quantity Generators

The Program

The City of Sioux Falls has developed a Business Hazardous Waste Management Program for Very Small Quantity Generators (VSQG) that offers businesses and organizations with safe, easy, environmentally friendly, and economical disposal options for small amounts of hazardous wastes. The City has contracted with a private environmental services company to provide these services.

Cost for Participants

The City of Sioux Falls funds the cost of the environmental contractor mobilization, transportation, and labor. Businesses will be invoiced through the environmental contractor for actual disposal of the waste. This cost will vary, depending on the waste type and quantity.

How the Program Works

1. **Determine your generator status.** Determine if you qualify as a Very Small Quantity Generator (VSQG). Call the City of Sioux Falls Environmental Division at **605-367-8276**. Staff will assist you in completing a verification form. If you qualify, Environmental will refer you to our contractor representative.
2. **Complete program application inventory forms.** Prior to being accepted, a contractor representative will contact you to complete waste inventory forms, a service form, and a credit check.
3. **Schedule a shipment.** Once the required forms have been completed, the contractor will schedule your business into one of our "milk run" shipments: contractor technicians will visit your facility, package your waste according to Department of Transportation requirements, and manifest the shipment according to federal, state, and local requirements.
4. **Finalize payment.** Businesses and organizations participating in this program will be invoiced for disposal fees only. Fees are based on types and quantities of waste.

Eligibility Requirements

Businesses and organizations must be located within Lake, Lincoln, McCook, Minnehaha, or Turner County. A business or organization must also be classified as a VSQG in accordance with 40 CFR 262.14, which means

it generates less than 2.2 pounds of acute or 220 pounds of toxic hazardous waste per month (not including all batteries, bulbs, and/or electronics).
